The methods are useful for screening for agents that alter MPT and/or cell survival. These agents are useful for the prevention treatment of diseases associated with altered mitochondrial function dysfunctional cell survival, such as Alzheimer's disease, diabetes mellitus, Parkinson's disease, Huntington's disease, schizophrenia, mitochondrial encephalopathy, lactic acidosis, stroke, hyperproliferative disorders e.g. cancer, and deafness.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence

CC comprising a regulated promoter operably linked to a nucleic acid CC comprising an adenine nucleotide translocator (ANT) polypeptide. ANT CC encoding an adenine nucleotide translocator (ANT) polypeptide. ANT CC matrix for ADP in the cytosol. (I) is useful for producing recombinant CC ant polypeptide by transforming a prokaryotic or eukaryotic host cell and CC culturing the host cell. (I) is also useful for targeting a polypeptide CC of interest to a mitrochondrial membrane, where ANT polypeptide is CC expressed as a fusion protein with the polypeptide of interest. (C expressed as a fusion protein with the polypeptide of interest. (C expressed as a fusion protein with the polypeptide of interest.) (C expressed as a fusion protein with the polypeptide of interest.) (C expressed as a fusion protein with the polypeptide of interest.) (C expressed as a fusion protein with the polypeptide of interest.) (C expressed as a fusion protein with the polypeptide.) (C expressed as a fusion protein with the polypeptide.) (C expressed as a fusion protein with an ANT polypeptide.) (C expressed as a fusion agent that binds to an ANT polypeptide.) (C expressed as a solid phase. Detectably labeled ANT ligand is also cuseful for identifying an agent that interacts with an ANT polypeptide.) (C The present sequence represents the coding sequence of human ANT2.)

```
The invention relates to isolated polynucleotide (1) and (1) polypeptide (II) sequences. (1) is useful as hybridisation probes, (2) polymerase chain reaction (PCR) primers, oligomers, and for chromosome (2) and gene mapping, and in recombinant production of (II). The (II) gene mapping, and in recombinant production of (II) from the printed (II) are tassed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a noolecular weight markers and as a noolecular weight markers and as a molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating (III) are useful for the printed (III) are useful for the printed (III) are useful for the printed (III) are treating (III) are useful for the printed (III) are treating (III) are treating (IIII) are treating (III) 
     New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 1; SEQ ID No
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Drmanac
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       31-MAR-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       was primed with a Noti-oligo(dT) primer. Five prime end enriched, double-stranded cDNA was digested with Not I and cloned into the Not I and Eco Ry Sites of the primer 6 vector. Library was normalized. Library was constructed by Life Technologies. treated with 74 DNA polymerase, and purified by ethanol-precipitation. The cDNAs were ligated to Lone-linker LL-Sal4, purified by phenol/chloroform, and separated from free linkers by Centricon 100. Then, the cDNAs were amplified by long-range high fidelity PCR using Ex Taq polymerase (Takara) with a primer Sal4-S. The products were purified by phenol/chloroform and Centricon 100. The cDNAs were digested with Sall and Notl enzymes and cloned into Sall/Notl site of psPORT1 plasmid vector. The DH10B E. coli host was transformed with the ligation mixture by the standard chemical method. The average insert size is about 2.5 kb. The library was constructed by Yulan Piao (NIA)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Double-stranded cDNAs were synthesized
